

DISASTER RECOVERY WITH PILLAR DATA SYSTEMS AND ORACLE

Business-critical operations need better protection than ever from disruption due to natural disasters, terrorism, or major geopolitical events. You're invited to a disaster recovery demonstration hosted by Pillar Data Systems and Oracle on March 30, 2006 at the Oracle Executive Technology Center (ETC) in Atlanta, GA.

Recent world events have shown that it's imperative for businesses to have strong disaster-recovery capabilities in place. With more systems online and business-critical information growing rapidly, companies can't afford not to recover quickly from even large scale disruptions.

Pillar and Oracle: combined expertise in affordable multi-tier storage technology and data protection and disaster recovery solutions. Learn how you can safeguard your vital systems. If disaster strikes, you'll be ready.

Production teams will demonstrate a full disaster recovery scenario. Failover and failback will take place between ETCs in Atlanta and Reston, VA, using the joint technology of Oracle DataGuard and Pillar Axiom storage systems. You'll also learn about Axiom Volume Replication as a complimentary disaster recovery solution for databases and applications.

To participate in this technology session, call XXX-XXX-XXXX or email xxxx@pillar.com.
